Subject: Yucca Mtn Project
:

I am concerned that the YMP may not be as secure a facility as we would desire because of two factors:

1. In the immediate vicinity of the project are many transverse and thrust faults that may present threats to the integrity of this structure.
2. In addition, many nuclear weapons were tested in this vicinity (both underground and atmospheric). Would this have a negative impact on the stability of geologic structures in which the YMP would be constructed.

Have these issues been adequately addressed in the draft EIS, and if so, would you please forward to me your summary of the findings either at this e-mail address or via snail-mail to: West Seneca West H.S., 3330 Seneca St., West Seneca, NY 14224.
Thank you for your time and consideration of my concerns.
